Qosina Face & Eye Protection Shields

Edgewood, NY, November 2, 2004 — Qosina is pleased to introduce face and eye protection to its expanded selection of disposable lab wear. Both the eye shields and full-face shields can be worn over surgical masks or eyeglasses. The downward angle of the shield protects wearer from splashes and sprays. Top and bottom openings prevent fogging by allowing air to circulate and do not block peripheral vision. These disposable full-face and eye shields have a distortion-free optical grade lens and are sold with a removable protective film to prevent scratches.

Stylish and comfortable to wear, lightweight polypropylene frames are offered in a choice of black, white, pink, yellow or red. Eye frames have a wide band for a comfortable fit, even over eyeglasses. An additional frame style has a polypropylene clip and adjustable evoprene tubing, providing a secure fit. An evoprene retainer cord is attached to this style for keeping eye protection available and preventing loss. The frames are available with polycarbonate shields in eye (goggle) or full-face styles. The disposable eye shields in goggle style are sold in packages of 100, and the full-face shields are sold in packages of 25.
